

Human Adaptability: Future Trends and Lessons from the Past, Perspective in Human Biology, Vol 3 (Perspectives in Human Biology)

This volume takes its subtitle from the theme of the ASHB meeting for 1996 Human Adaptability: Future Trends and Lessons from the Past. The first paper is the annual conference lecture Human Evolution Today: Which Way Next? delivered by Professor Maciej Hennenberg, the newly appointed Wood Jones Professor at the University of Adelaide. This is followed by the transcripts of two papers resulting from a debate on Species and Human Evolution, also from the meeting. The first is Species Concept in Palaeoanthropology by Colin Groves and the second, The Problem of Species in Hominid Evolution by Maciej Hennenberg. There are also a series of individual papers. Two of these are shorter integrative pieces: Philosophical Problems in Palaeoanthropology by Darren Curnoe, and A Biological Basis for Generative Learning in Science by Lynette Schavieren and Mark Cosgrove. These are followed in turn by two proffered papers on specific problems: Patterns of Morphological Discrimination in the Human Talus: a Consideration of the Case for Negative Function, by Robert Kidd and Charles Oxnard, and The Specific Status of a new Siwalik Sivapithecine Specimen by David Cameron, Rajeev Patnaik and Michelle Stevens. The final contribution is one of the longer integrative papers which has characterised each of the prior volumes: The Interface of Function, Genes, Development and Evolution: Insights from Primate Morphometrics by Charles Oxnard.

Hansen Family Farm
Japanese Black Trifele

We are happy to provide quality fresh fruits, vegetables, Grass-fed and Finished Beef, Naturally & Humanely raised Pork, Pastured Chickens, and Cage Free Eggs to Clackamas County sustainably on our small acreage.

We strive to provide vegetables that grow well in our climate ensuring the best tasting local food available. We prefer to grow old-fashioned and rare varieties of vegetables believing that they are the best to offer but do also grow a very select, few varieties of hybrids, but they are counted on one hand! Much of what we grow, we save the seed of every year and re-offer it to members of the Seed Savers Exchange.

We thank all of you, the “locavores”, food enthusiasts, market goers, and home chefs for making our goal of fresh, local, fruits and veggies sustainably a reality.

Latest News....

Phil and Christie Hansen

2015 is off to a great start! We are looking forward to what this year has to offer!

All our efforts are gearing up to get the growing season started...from ordering/starting/transplanting seeds, planning rotation crops for the fields, cleaning the greenhouses and field equipment, and clearing the fields! There is not a dull day here on the farm!

Planning for garden start varieties is in full swing also. This year we will be offering many of our favorite heirlooms, open-pollinated, and hybrid varieties that we have grown for the past 10+ years as well as many new-to-us varieties. We are diligent to not purchase, offer or grow GMO seeds or food.

Our mix of garden starts includes many different varieties of tomatoes, cucumbers, peppers, ground cherries, pumpkins, melons, flowers and other great things for your garden! Most, if not all, varieties are tried and true for our Pacific Northwest valley climate. Check out the Garden Start page for a printable list of varieties available. Or go directly to a specific list at our Tomato, Pepper, and Other garden start pages.

We grew over 100 heirloom/open-pollinated Pepper varieties and 125+ varieties of heirloom/open-pollinated Tomatoes in 2014! Not counting the numerous other garden necessities like heirloom flowers, cucumbers, summer and winter squash, herbs, and melons amongst other rare and hard to find vegetables! In 2015 we will continue with the tradition we've started and will be planting and growing almost all the varieties that have been started so that even if you don't buy a plant you have a chance to taste a range of different flavors!
