

A collection of essays by scientists which present the current state of thought about the evolution of life in terms of cosmological theory and the fossil record. The contributors have summarized and interpreted current knowledge on the stages of the development of life from the origins of the universe and early life, to the emergence of the primates and man and including reference to evolution patterns of invertebrates, vertebrates and plants, the colonization of the land and evolution of flight. The work concludes with a consideration of the controversy of evolution versus creationism.

These include marine fossils, for which a poor fossil record cannot be used as an Evidence for evolution - fossils. Most of the evidence for evolution comes from the fossil record. Fossils show how much, or how little, organisms have changed over time. One of the problems with the fossil record is that it contains gaps. **Evolution in the Fossil Record - UNE - Course and Unit Catalogue** As one of the founders of the modern synthesis of evolution, paleontologist George Gaylord Simpson argued that the fossil record supports Darwins theory that **What Is the Evidence for Evolution Found in the Fossil Record** The fossil record has long been recognized as a problem for evolutionary theory.
